

FMS Entries & Reroutes

The following slides will introduce:

- FMS Waypoints
- FMS Tracking
- FMS Holding

FMS – Waypoints

Along Course Waypoints

1. Create the waypoint, 35 nm this side of APE in the scratchpad:
APE/-35

ACT LEGS 7067		2/4
SEQUENCE		
SINDE	AUTO/INHIBIT	
279°		
GEFFS	---	----
305° 15 NM		
HACKS	---	----
319° 92 NM		
APE	---	----
280° 30 NM		
DANEI	250/11000	

<RWY UPDATE	LEG WIND>	
[APE/-35]

2. Drop on top of the waypoint on which it was based:
The FMS will “auto-place” the waypoint where it belongs.

ACT LEGS 7067		2/4
SEQUENCE		
SINDE	AUTO/INHIBIT	
279°		
GEFFS	---	----
305° 15 NM		
HACKS	---	----
319° 57 NM		
APE01	---	----
319° 35 NM		
APE	---	----

<RWY UPDATE	LEG WIND>	
[]

3. Create the waypoint, 10 nm on the other side of APE in the scratchpad:
APE/10

ACT LEGS 7067		2/4
SEQUENCE		
SINDE	AUTO/INHIBIT	
279°		
GEFFS	---	----
305° 15 NM		
HACKS	---	----
319° 92 NM		
APE	---	----
280° 30 NM		
DANEI	250/11000	

<RWY UPDATE	LEG WIND>	
[APE/10]

4. Drop on top of the waypoint on which it was based:
The FMS will “auto-place” the waypoint where it belongs.

ACT LEGS 7067		2/4
SEQUENCE		
SINDE	AUTO/INHIBIT	
279°		
GEFFS	---	----
305° 15 NM		
HACKS	---	----
319° 92 NM		
APE	---	----
280° 10 NM		
APE01	---	----

<RWY UPDATE	LEG WIND>

FMS – Waypoints

Place/Bearing/Distance

1. Create a waypoint on the IGB VOR Radial 290 at 45 DME:
IGB290/45

ACT LEGS 7067		SEQUENCE 2/3
		AUTO/INHIBIT
VUZ	263° 19 NM	
FIBER	263° 62 NM	---/----
IGB	269° 88 NM	---/----
SQS	256° 182 NM	---/----
EIC		---/----
<RWY UPDATE LEG WIND>		
[IGB290/45]		

2. Drop the waypoint where it belongs:
The FMS will **not** "auto-place" the waypoint.

ACT LEGS 7067		SEQUENCE 2/3
		AUTO/INHIBIT
VUZ	263° 19 NM	
FIBER	263° 62 NM	---/----
IGB	289° 45 NM	---/----
Drop Here → IGB01	249° 49 NM	---/----
SQS		---/----
<RWY UPDATE LEG WIND>		
[]

Place Bearing/Place Bearing

1. Create a waypoint at the crossing of the SGF VOR Radial 025 and the MKC VOR Radial 125:
SGF025/MKC125

ACT LEGS 4987		SEQUENCE 2/4
		AUTO/INHIBIT
PEABO	079° 75 NM	
BUM	105° 101 NM	---/----
TRAKE	089° 25 NM	---/----
KAYLA	091° 19 NM	---/----
YUGGA		---/----
<RWY UPDATE LEG WIND>		
[SGF025/MKC125]		

2. Drop the waypoint where it belongs:
The FMS will not "auto-place" the waypoint.

ACT LEGS 4987		SEQUENCE 2/4
		AUTO/INHIBIT
PEABO	079° 75 NM	
BUM	040° 35 NM	---/----
Drop Here → SGF01	105° 101 NM	---/----
TRAKE	089° 25 NM	---/----
KAYLA		---/----
<RWY UPDATE LEG WIND>		
[]

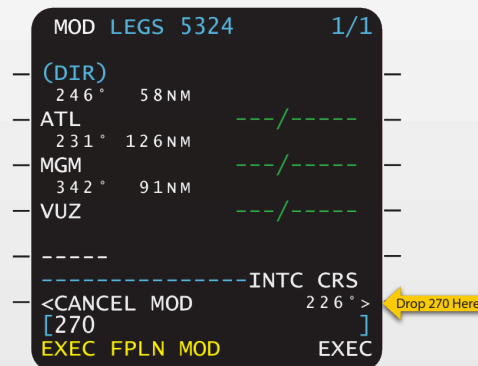

FMS – Tracking

Track a Radial Inbound

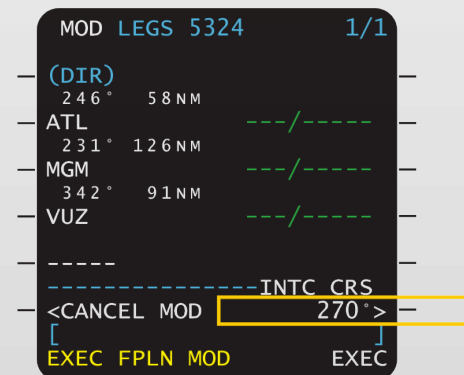

Example: "Fly heading 180. Intercept and track inbound on the ATL 090 degree radial."

- On the LEGS page:
Place the fix in the TO line (line select 2L).

- On the INTC CRS line (line select 6R):
Place the inbound course (in this case, 270).

Tracking the 090 degree radial inbound results in a 270 degree course.

When you first put something in the TO line (line select 2L), the FMS assumes you want to fly direct to that fix. If you do not want to fly direct, you must define how you want to arrive at that fix.

FMS – Tracking

Track a Radial Outbound

```

-----
<CANCEL MOD      LEG WIND>
[ATL090/50      ]
EXEC
    
```

```

MOD LEGS      1/4
ATL      SEQUENCE
ATL01    AUTO/INHIBIT
          ---/-----
    
```

Fly heading 180, intercept the ATL 090 radial outbound

Example: "Fly heading 180. Intercept and track outbound on the ATL 090 degree radial."

On the LEGS page:

1. Create a waypoint on the intended radial that is far enough out that you will not reach it.
2. ATL090/50

```

MOD LEGS 5324      1/1
(DIR)
246° 58NM
ATL      ---/-----
Drop Here
-----
-----INTC CRS
<CANCEL MOD      246°>
[ATL090/50      ]
EXEC FPLN MOD      EXEC
    
```

3. Insert the waypoint directly after the NAVAID upon which the radial is based.

```

MOD LEGS 5324      1/1
ATL
089° 24NM
ATL01    ---/-----
-----
-----INTC CRS
<CANCEL MOD      246°>
[EXEC FPLN MOD      EXEC
    
```

4. If the intercept will be after the NAVAID, put it behind you by dropping it in the FROM line (line select 1L).

The FMS cannot track away from a waypoint. To track outbound, you must create a fix that lies along the intended course. The distance is arbitrary, but must be far enough that it will never be reached.

FMS – Holding

Holding at a Waypoint on the Flight Plan

The only holds pre-programmed into the FMS are those that are part of Instrument or Missed Approach Procedures. When a hold waypoint is selected, the FMS defaults to hold on the inbound or current heading, right-hand turns, and 1.0 or 1.5 minutes legs, depending on altitude. These defaults could appear very similar to the published hold.

Always verify that the selected holding course, turn direction, and leg length match your clearance.

S.A.F.E: Speed, Altitude, Fuel, EFC

From the LEGS page:

1. Select the HOLD function key on the CDU.
2. The HOLD AT field will display at line select 6L.

ACT LEGS 4963 1/2

SEQUENCE

KCRW 266° 8NM

HVQ 208° 166NM

SOT 194° 67NM

ODF 220° 29NM

FLCON

----- HOLD AT -----

LEG WIND>

[FLCON]

If one or more holds are already programmed into the FMS, the ACT FPLN HOLD page or ACT HOLD LIST page will be displayed. In this case, push NEW HOLD.

- Select the waypoint from the flight plan (in this case FLCON) and drop it on the HOLD AT line (line select 6L).

FMS – Holding

Holding at a Waypoints Not on the Flight Plan

From the LEGS page:

1. Push the HOLD key
2. If the ACT FPLN HOLD page or the ACT HOLD LIST page is showing, push NEW HOLD.
3. Insert the waypoint in the HOLD AT prompt.
4. Select the waypoint the HOLD will precede.
5. Change the defaults to match your clearance as required.

FMS – Holding

Present Position Holding

From the LEGS page

1. Push the HOLD key.
2. If the ACT FPLN HOLD page or the ACT HOLD LIST page is showing, push NEW HOLD.
3. Push the PPOS line select key to show the HOLD page with the present position as the holding fix.
4. Change the defaults to match your clearance as required.

FMS – Holding

Exit Holding

From the LEGS page:

1. Select EXIT HOLD (line select 6L); or
2. Place another waypoint in the flight plan on the TO line (line select 2L).
